AGENDA

- » Review
 - » Validation on Models
 - » Errors on Forms
 - » Flash Messages
- » Lab Session

REVIEW

VALIDATION

- » Ensures that we are saving accurate information in the database
- » If our validation fails, don't add record to the database table
- » If our validation fails let the user know it failed

REVIEW

ERRORS

- » ActiveRecord sets errors when validation rules fail
- » We can use these in the view!

```
<% if @shirt.errors.any? %>
  <h2>There were errors saving your shirt</h2>
  <ul>
    <% @shirt.errors.full_messages.each do |msg| %>
      <li><%= msg %></li>
    <% end %>
  </ul>
<% end %>
```

REVIEW

FLASH MESSAGES

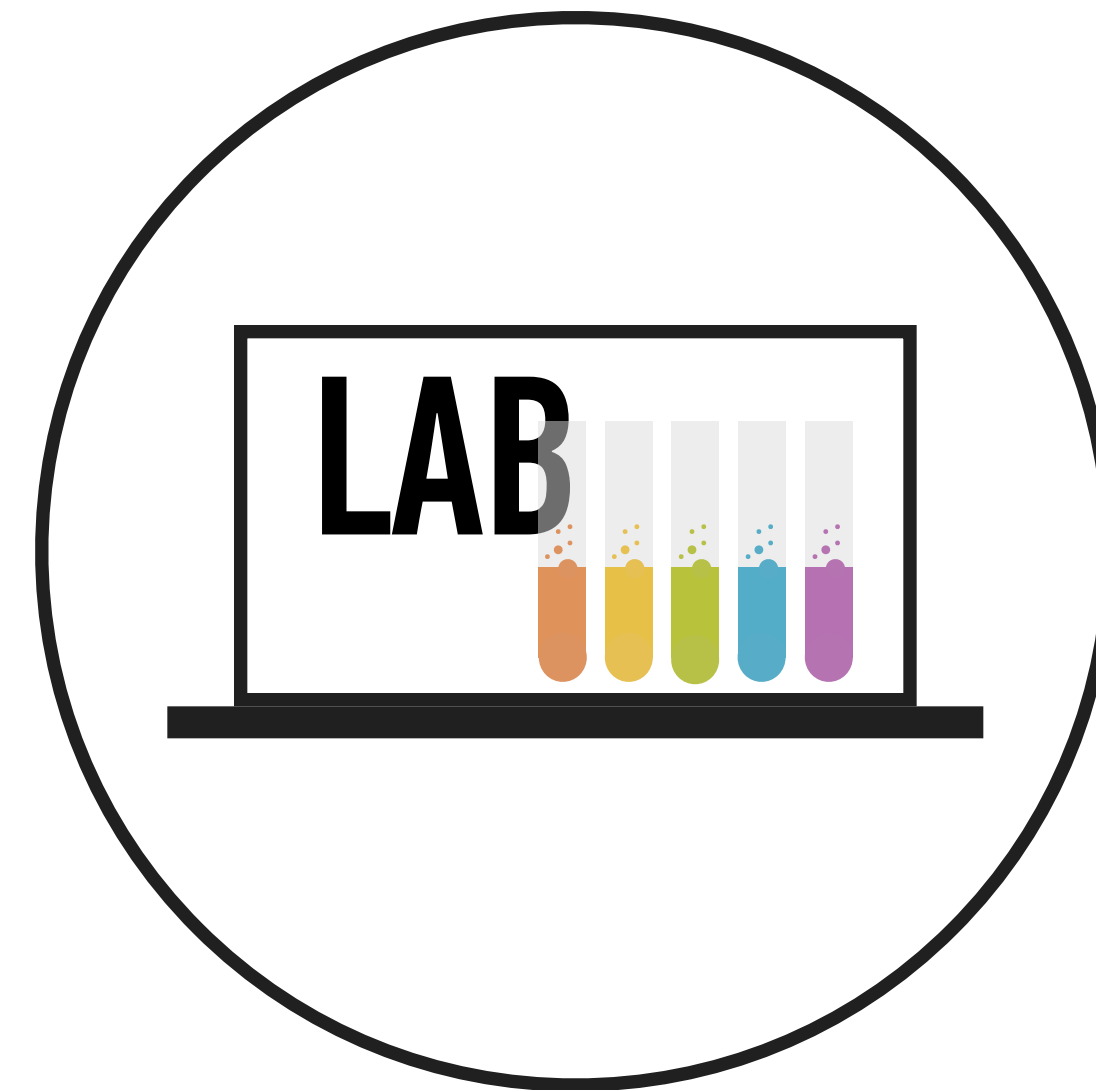

- » Set flash messages in your controllers
- » eg. success, warning, error messages

```
def load_shirt
  @shirt = Shirt.find(params[:id])
  rescue ActiveRecord::RecordNotFound
    flash[:notice] = "Invalid Shirt ID #{params[:id]}"
    redirect_to root_path
end
```

- » Use this variable in your view!

```
<% flash.each do |name, msg| -%>
  <%= content_tag :div, msg, class: name %>
<% end %>
```
